You are required to document proficiency in English

Langues d'enseignement
Anglais

Renseignements pratiques

Durée de la formation : 4 semestres

Formation : Présentiel, Temps plein

Validation

Nombre d'ECTS délivrés : 120

Programme

Students get a thorough introduction to forestry's local and global role in middle and low-income countries during their first year. All students complete their first semester in Copenhagen, where faculty from all GloFor Universities join the teaching activities. During February, the first year, all students and one teacher from each GloFor University participate in a joint field course in a middle or low-income country. Then, students move to either Dresden or Padua to complete their first year.

In their second year, students pursue a particular line of specialisation in any one of the five GloFor Universities:

Livelihoods and Governance (Copenhagen)
Management and Policy (Dresden)
Tropical Forest Ecology (Kourou & Montpellier)
Social and Environmental Responsibility (Padua)
Agroforestry Systems (Prague)

Débouchés

Through an outstanding, research based education, graduates will gain the required competencies for working with global forestry issues:

- a firm theoretical foundation
- practical and international experience
- openness to foreign cultures.

These are all competencies needed for working as a researcher or in tropical forest practice, e.g. with a development agency, consultancy company, NGO, international organisation, ministry, or governmental agency. Successful students will also be able to apply to high-level international PhD programmes.
